Reference: Summary Report
Elevator Control and Smart Reel System
1985' Community TV Tower
Sioux Falls, SD
December 4, 2009

Subject: Tower Elevator Systems, Inc.

To Whom it May Concern:

TESI designed, furnished and installed upgrades on the elevator system located on our 1,985' tall TV broadcast tower in December 2006. Service provided included commissioning and training. The equipment installed included the Smart Reel cable management system and a full feature Controller system with rescue mode.

Both have performed reliably since installed, including throughout the severe winter conditions experienced on the tower located in South Dakota.

In the few instances of warranty service of the snap brackets I can report the TESI team was prompt and very customer service oriented.

We are very satisfied both with the products and the service from Tower Elevator.
